Roots Blower

Short Description:

Roots Blower for Stable Airflow & Industrial Applications Reliable
Positive Displacement Blower for Wastewater, Pneumatic Conveying
& Aeration Systems

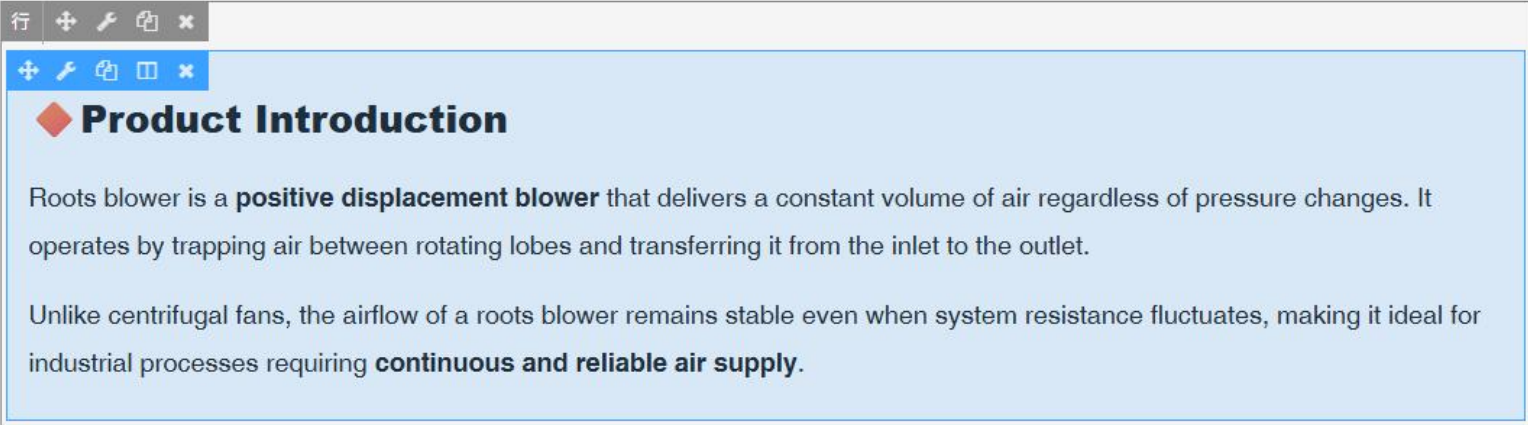

[SUBMIT FORM](#)

Product Introduction

Roots blower is a positive displacement blower that delivers a constant volume of air regardless of pressure changes. It operates by trapping air between rotating lobes and transferring it from the inlet to the outlet.

Unlike centrifugal fans, the airflow of a roots blower remains stable even when system resistance fluctuates, making it ideal for industrial processes requiring continuous and reliable air supply.
